

ER DIAGRAMS

Presentation by Yaneli Cruz

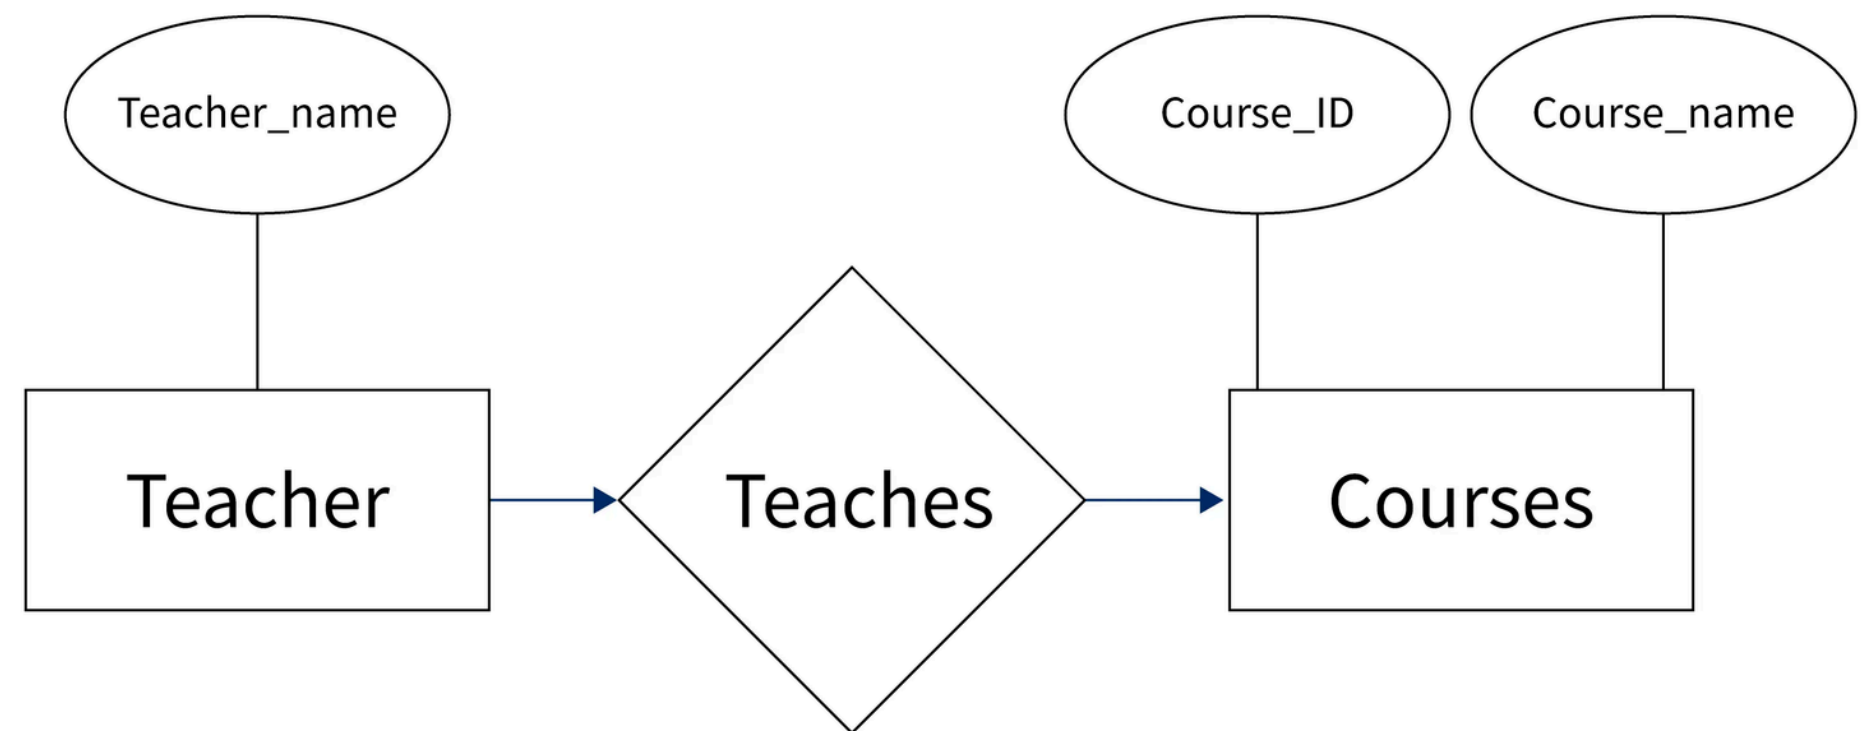

AGENDA

Intro, History, Demo, Potential Usage in
Capstone Projects

INTRO

- **Entity** = thing we store data about
- **Attribute** = detail about that thing
- **Relationship** = connection between things

RELATIONAL DATABASE

- Data is stored in tables
- **Primary key:** unique ID for each row
- **Foreign key:** connects related tables

Users

id	name	email
1	Alice	alice@
2	Bob	bob@
3	Charlie	charlie
3	charlie	emax@

Foreign Key

Orders

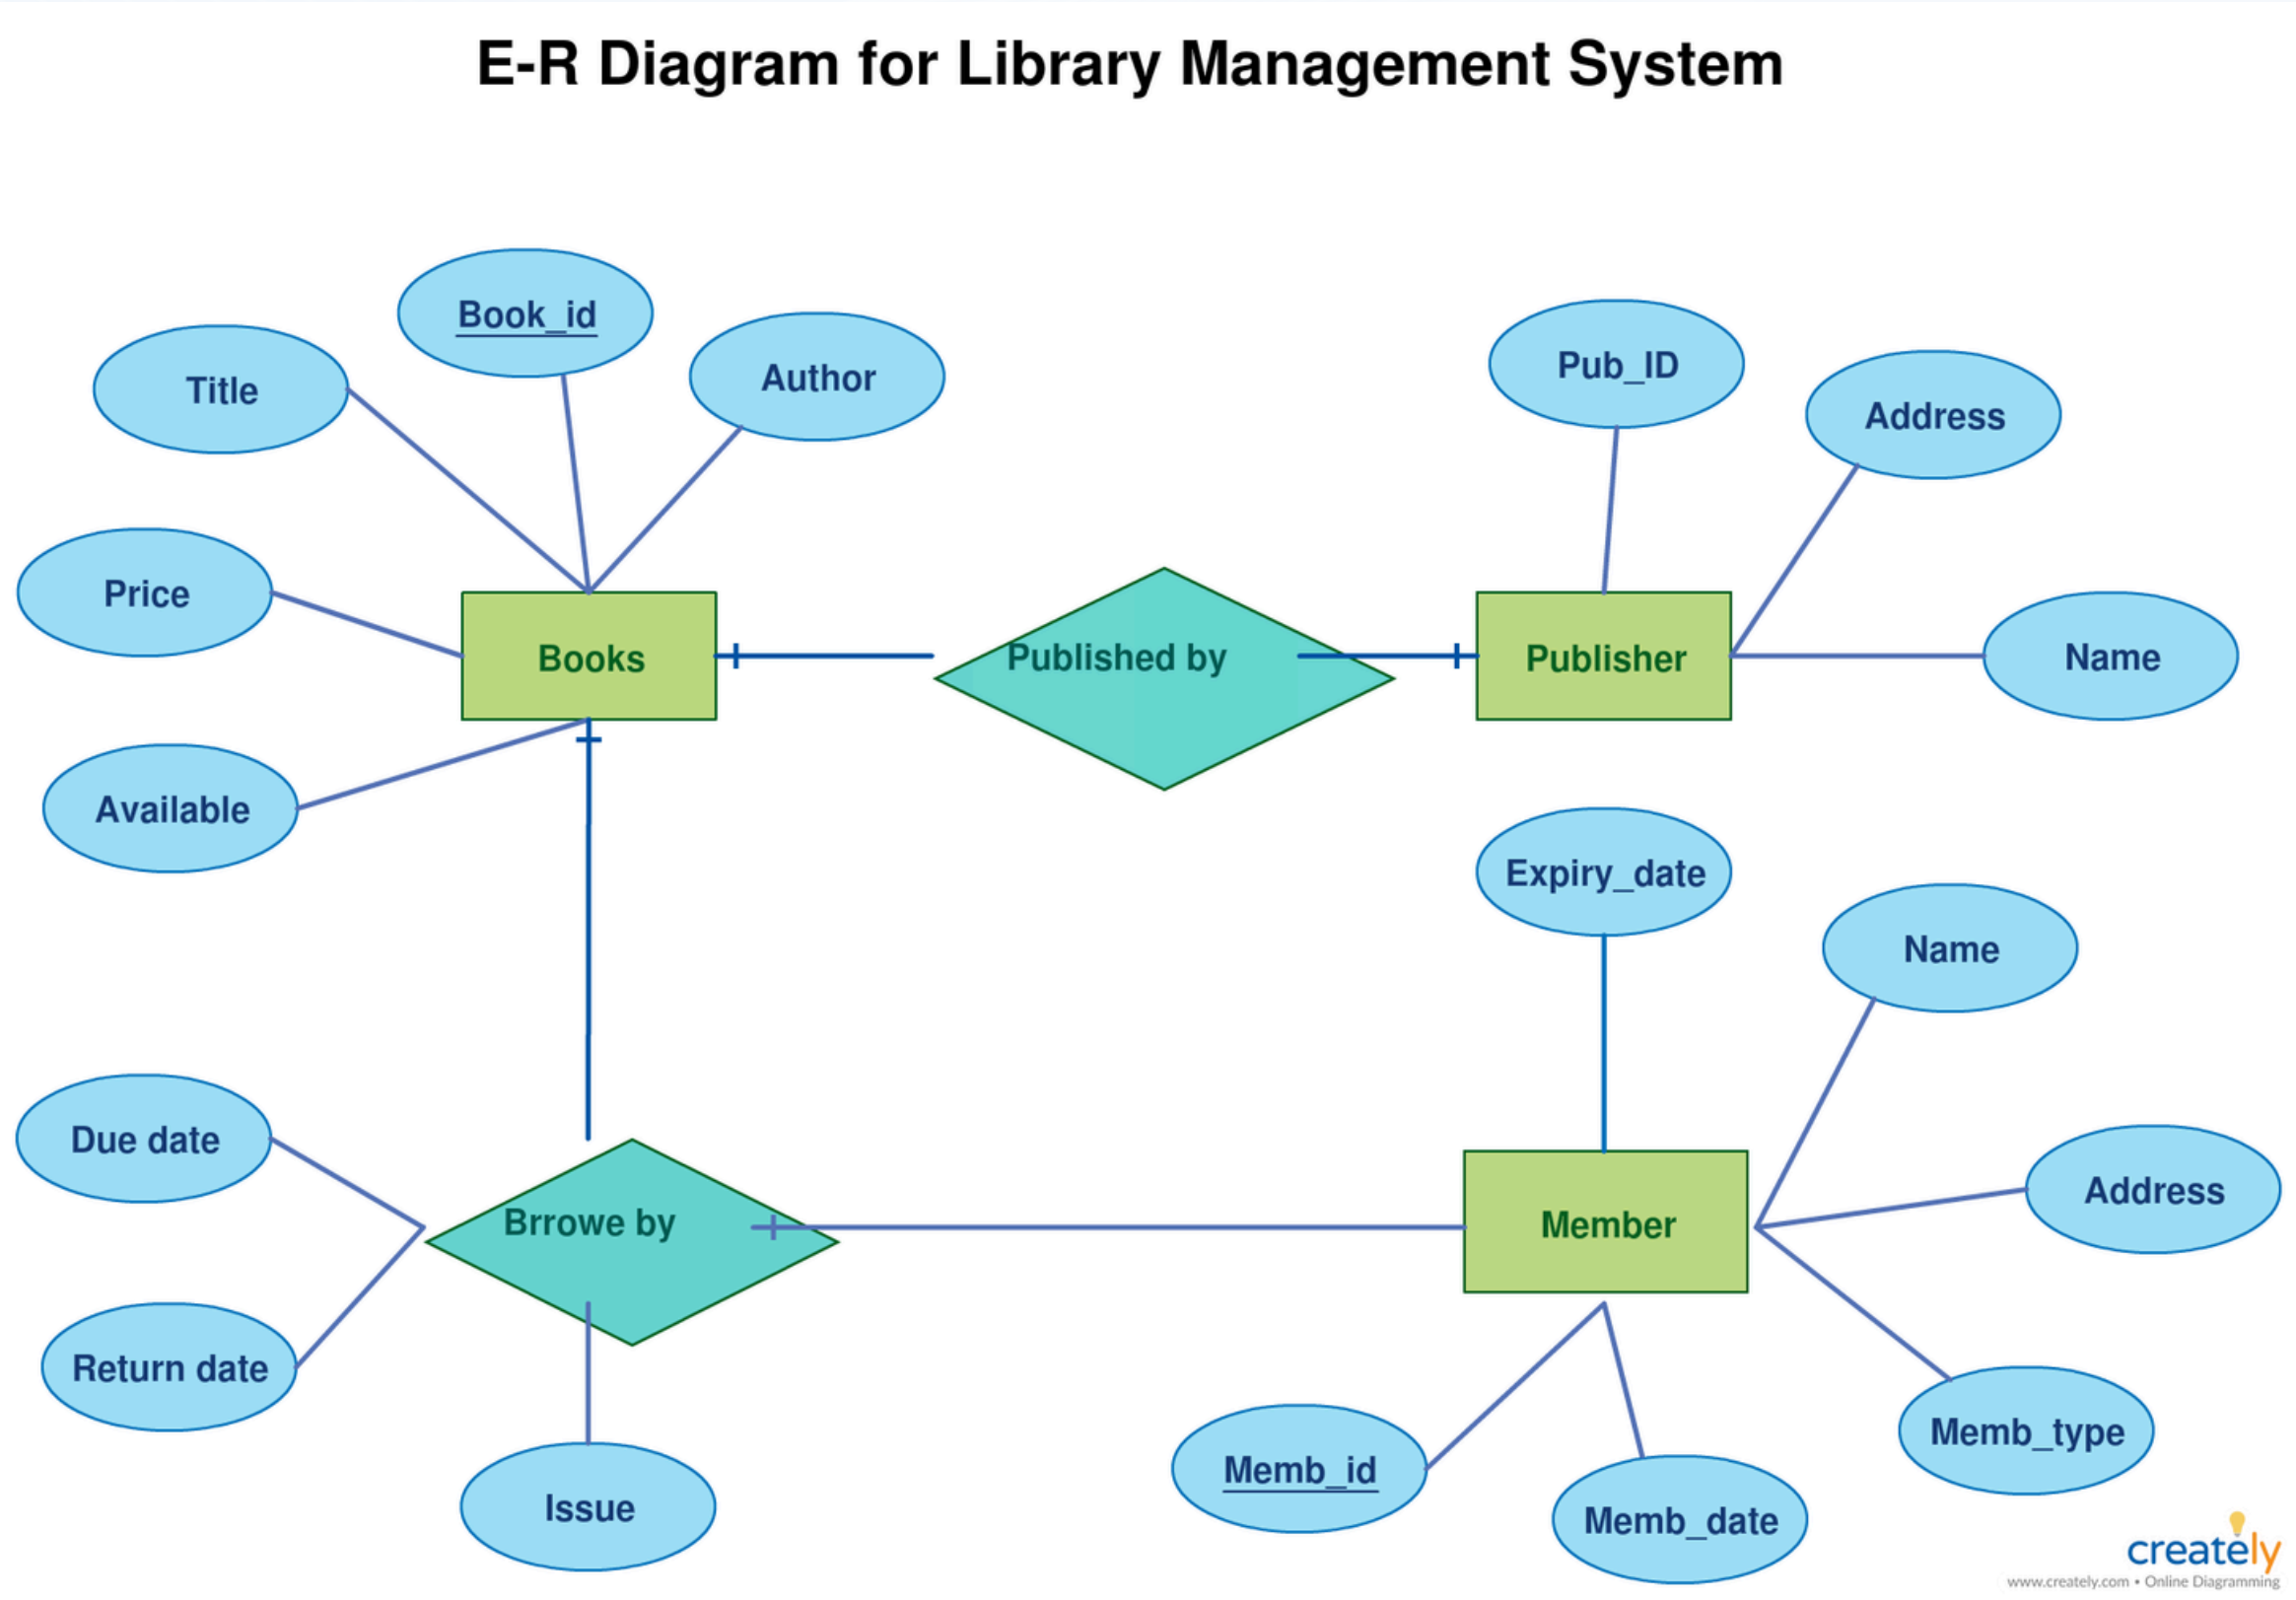

id	user_id	amount
101	1	100.00
102	3	35.50
103	2	200.00

HISTORY

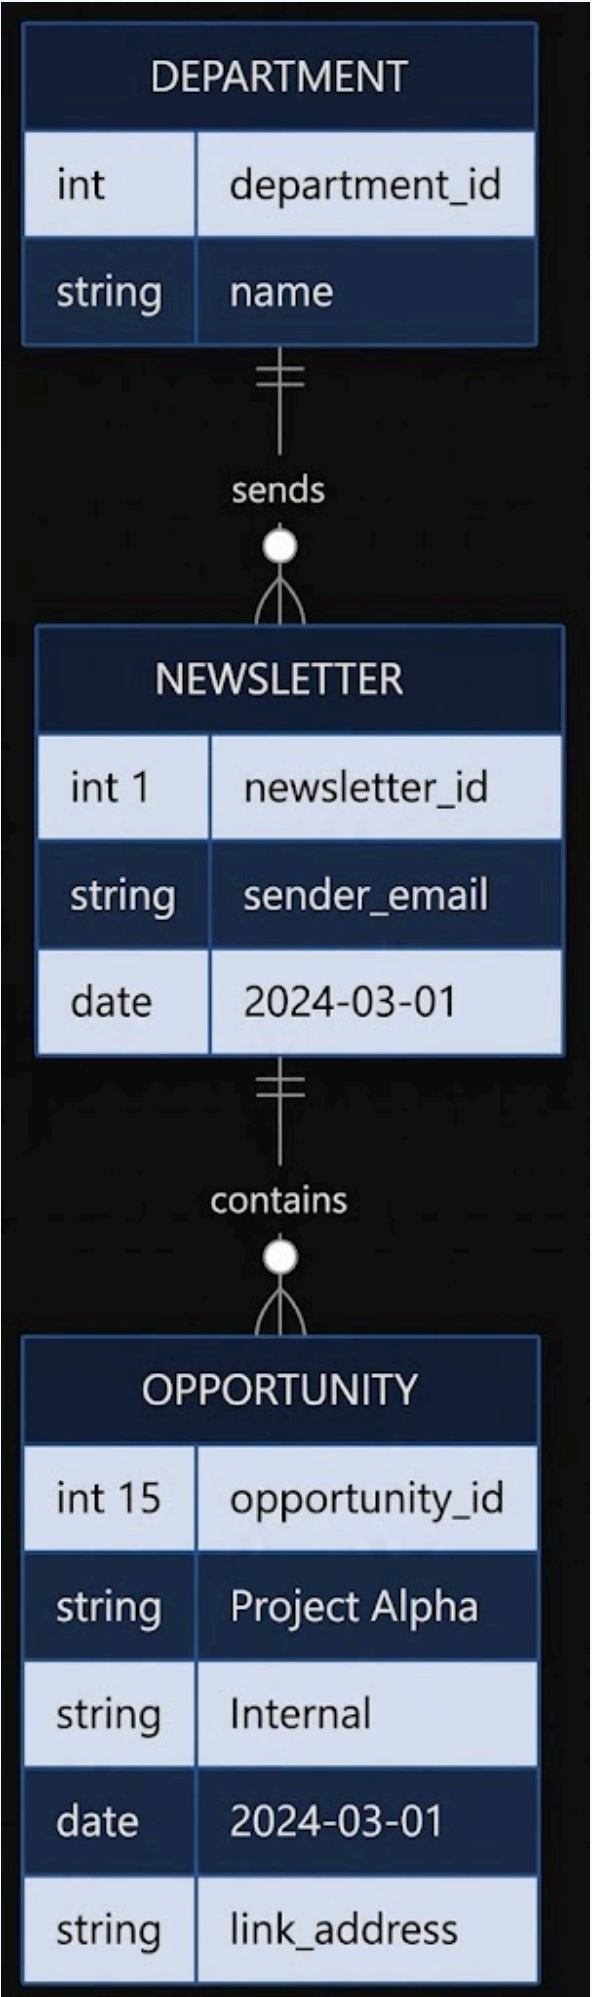

- **1976:** Peter Chen publishes the ER model
- **Purpose:** Plan data before building a database
- **Today:** Used in software development and database education

DEMO

POTENTIAL USAGE

SUMMARY

- ER diagrams visually plan database structure
- Entities, attributes, and relationships organize data
- Primary and foreign keys connect related information
- They can guide future development of our capstone
