Retrospective

What went well:

- ★ Connected GitHub to Jira to automate our work log
- ★ Almost done with frontend components, which will make it easier to connect with the backend
- ★ Set up the database

What didn't go well:

- ★ Unforeseen Technical Setbacks
- ★ Burndown Chart

How we will improve:

- ★ More Communication
- ★ Backup Laptop data

Planning

- ★ Fix the scraper logic to handle larger amounts of data (formatting)
  - No duplicate events, null values being handled better, etc.
- ★ Connect scraper directly to Supabase
  - Currently manually uploading CSV file
- ★ Connect frontend and backend to display data from the database
- ★ Finish developing the frontend for the remaining pages

Thank you!
